

Fasara films provide a creative and presentable area that not only modernizes the look of your surroundings but creates privacy at the same time. This innovation has created many new décor opportunities for the commercial and residential environment. With the cost at a fraction of etched glass, these films are making their way more and more into undeveloped areas of interior design with an added attribute of functionality. Fasara films allow light to penetrate into an area but creates a foggy and serene look to both sides of the glass. This allows for great privacy without the addition of walls or partitions, in addition these films can block out up to 99% of harmful UV light. There are many different films with different opacity levels and all are easy to maintain and can be cleaned with most window-cleaning agents. These films are great for conference rooms, offices, bedrooms, libraries, retail, etc... All Fasara films may be cut into with a company logo or design that may be incorporated into the décor of a room. The effect is stunning, and best of all not as expensive as acid etched glass with the added bonus of being able to remove it in the future.

FASARA Films
